

## ABSTRACT

The present invention relates to cannabinoic quinone compounds, and especially to their medical use. In particular five cannabinoic quinones, designated HU-331, HU-336, HU-345, HU-395 and HU-396 are herein described as active agents in pharmaceutical compositions. Said compounds and compositions thereof are intended for the treatment of inflammatory, infectious, auto-immune and particularly hyperproliferative disorders. Thus, the compounds of the invention may be used as anti-tumor agents, or for the treatment of cancer. Furthermore, three of these compounds, HU-345, HU-395 and HU-396, are novel cannabinoic quinones and thus are also claimed herein.
